## 1 QUESTION

(CSIR-UGC-NET June 2015 Q 104) Let  $X$  and  $Y$  be random variables with joint cumulative distribution function  $F_{XY}(x, y)$ . Then which of the following conditions are sufficient for  $(x_0, y_0) \in \mathbb{R}^2$  to be a point of continuity of  $F_{XY}$ ?

- 1)  $p_{XY}(x = x_0, y = y_0) = 0$
- 2) Either  $p_{XY}(x = x_0) = 0$  or  $p_{XY}(y = y_0) = 0$ .
- 3)  $p_{XY}(x = x_0) = 0$  and  $p_{XY}(y = y_0) = 0$ .
- 4)  $p_{XY}(x = x_0, y \leq y_0) = 0$   
and  $p_{XY}(x \leq x_0, y = y_0) = 0$ .

## 2 ANSWER

Let  $F_{XY}(x, y)$  be joint cumulative distribution function and  $P_{XY}(x, y)$  be joint probability distribution function.

**Lemma 2.1.**  $F_{XY}(x, y)$  is continuous at  $(x_0, y_0)$  iff all

$$p_{X,Y}(x = x_0, y \leq y_0) \quad (1)$$

$$p_{X,Y}(x \leq x_0, y = y_0) \quad (2)$$

$$p_{X,Y}(x = x_0, y = y_0) \quad (3)$$

exists and is finite.

*Proof.* One of the unique properties of cdf is

$$\text{continuity of cdf} \Leftrightarrow \text{differentiability of cdf.} \quad (2.0.1)$$

Lets check the conditions for differentiability of cdf. For cdf to be differentiable at  $(x_0, y_0)$

1)

$$\lim_{h \rightarrow 0} \frac{F_{XY}(x_0 + h, y_0) - F_{XY}(x_0, y_0)}{h} \in \mathbb{R} \\ \Rightarrow p_{XY}(x = x_0, y \leq y_0) \in \mathbb{R} \quad (2.0.2)$$

2)

$$\lim_{k \rightarrow 0} \frac{F_{XY}(x_0, y_0 + k) - F_{XY}(x_0, y_0)}{k} \in \mathbb{R} \\ \Rightarrow p_{XY}(x \leq x_0, y = y_0) \in \mathbb{R} \quad (2.0.3)$$

3)

$$\lim_{t \rightarrow 0} \frac{F_{X,Y}(x_0 + u_1 t, y_0 + u_2 t) - F_{X,Y}(x_0, y_0)}{t} \in \mathbb{R} \\ \Rightarrow p_{X,Y}(x = x_0, y = y_0) \in \mathbb{R} \quad (2.0.4)$$

From equation 2.0.1, 2.0.2, 2.0.3, 2.0.4 we can say that lemma 2.1 is true.  $\square$

**Now lets verify the options**

- 1) Option 1  $\Rightarrow$  (3), but Option 1  $\nRightarrow$  (1) & (2). Hence it fails lemma 2.1.

**Counter-example:-**

Let's consider an example similar to dirac-delta function.

$$P_{XY}(x, y) = \infty \quad (x, y) = (x_0, y_1), y_1 < y_0 \\ = 0 \quad \text{otherwise} \quad (2.0.5)$$

Here  $P_{XY}(x_0, y_0)$  is 0 still  $F_{XY}$  is not continuous at  $(x_0, y_0)$  parallel to X-axis

$$F_{XY}(x, y) = 1 \quad x > x_0, y > y_1 \\ = 0 \quad \text{otherwise} \quad (2.0.6)$$

**So option 1 is false**

- 2) Option 2  $\Rightarrow$  (3), either (1) or (2). Hence it fails lemma 2.1.

**Counter-example:-**

Lets consider another function similar to dirac delta function

$$P_{XY}(x, y) = \infty \quad (x, y) = (x_1, y_0), x_1 < x_0 \\ = 0 \quad \text{otherwise} \quad (2.0.7)$$

Here  $p_{XY}(Y = y_0) = 0$  but  $F_{XY}$  is not continuous at  $(x_0, y_0)$ .

$$F_{XY}(x, y) = 1 \quad x > x_1, y > y_0 \\ = 0 \quad \text{otherwise} \quad (2.0.8)$$

**So option 2 is also false**

3) Option 3 satisfies lemma 2.1.

**So option 3 is true**

4) Option 4 also satisfies lemma 2.1.

**So option 4 is also true**

**Hence correct options are 3,4.**
