1 Question

(CSIR-UGC-NET June 2015 Q 104)Let X and Y be random variables with joint cumulative distribution function $F_{XY}(x, y)$. Then which of the following enditions are sufficient for $(x_0, y_0) \in \mathbb{R}^2$ to be a point of continuity of F_{XY} ?

- 1) $p_{XY}(x = x_0, y = y_0) = 0$
- 2) Either $p_{XY}(x = x_0) = 0$ or $p_{XY}(y = y_0) = 0$.
- 3) $p_{XY}(x = x_0) = 0$ and $p_{XY}(y = y_0) = 0$.
- 4) $p_{XY}(x = x_0, y \le y_0) = 0$ and $p_{XY}(x \le x_0, y = y_0) = 0$.

2 Answer

Let $F_{XY}(x, y)$ be joint cumulative distribution function and $P_{XY}(x, y)$ be joint probability distribution function.

Lemma 2.1. $F_{XY}(x, y)$ is continuous at (x_0, y_0) iff all

- 1) $p_{X,Y}(x = x_0, y \le y_0)$
- 2) $p_{X,Y}(x \le x_0, y = y_0)$
- 3) $p_{X,Y}(x = x_0, y = y_0)$

exists and is finite.

Proof. One of the unique properties of cdf is

continuity of cdf
$$\Leftrightarrow$$
 differentiability of cdf. (2.0.1)

Lets check the conditions for differentiability of cdf. For cdf to be differentiable at (x_0, y_0)

1)
$$\lim_{h \to 0} \frac{F_{XY}(x_0 + h, y_0) - F_{XY}(x_0, y_0)}{h} \in \mathbb{R}$$

$$\Rightarrow p_{XY}(x = x_0, y \le y_0) \in \mathbb{R} \quad (2.0.2)$$

2)
$$\lim_{k \to 0} \frac{F_{XY}(x_0, y_0 + k) - F_{XY}(x_0, y_0)}{k} \in \mathbb{R}$$

$$\Rightarrow p_{XY}(x \le x_1, y = y_0) \in \mathbb{R} \quad (2.0.3)$$

3)
$$\lim_{t \to 0} \frac{F_{X,Y}(x_0 + u_1 t, y_0 + u_2 t) - F_{X,Y}(x_0, y_0)}{t} \in \mathbb{R}$$

$$\Rightarrow p_{X,Y}(x = x_0, y = y_0) \in \mathbb{R}$$
(2.0.4)

From equation 2.0.1 ,2.0.2 ,2.0.3 ,2.0.4 we can say that lemma 2.1 is true. \Box

Now lets verify the options

1) Option $1 \Rightarrow 2.1-3$, but Option $1 \Rightarrow 2.1-1$ & 2.1-2. Hence it fails lemma 2.1.

Counter-example:-

Let's consider an example similar to dirac-delta function.

$$P_{XY}(x, y) = \infty$$
 $(x, y) = (x_0, y_1), y_1 < y_0$
= 0 otherwise (2.0.5)

Here $P_{XY}(x_0, y_0)$ is 0 still F_{XY} is not continuous at (x_0, y_0) parellel to X-axis

$$F_{XY}(x, y) = 1$$
 $x > x_0, y > y_1$
= 0 otherwise (2.0.6)

So option 1 is false

2) Option $2 \Rightarrow 2.1-3$, either 2.1-1 or 2.1-2. Hence it fails lemma 2.1.

Counter-example:-

Lets consider another function similar to dirac delta function

$$P_{XY}(x, y) = \infty$$
 $(x, y) = (x_1, y_0), x_1 < x_0$
= 0 otherwise (2.0.7)

Here $p_{XY}(Y = y_0) = 0$ but F_{XY} is not continuous at (x_0, y_0) .

$$F_{XY}(x, y) = 1$$
 $x > x_1, y > y_0$
= 0 otherwise (2.0.8)

So option 2 is also false

3) Option 3 satisfies lemma 2.1.

So option 3 is true

4) Option 4 also satisfies lemma 2.1.

So option 4 is also true

Hence correct options are 3,4.
